Cluster Monitor [GitHub]: Developed a Linux monitoring agent that allows a user to monitor and store machine specifications and usage information for multiple Linux systems. The agent employs Bash Scripts to collect machine hardware information, which is then stored in a PostgreSQL database provisioned using Docker. Resource usage is fetched periodically with Crontab and the data aggregated can then be manipulated using SQL queries.

Core Java Apps [GitHub]:

- Twitter App: Currently in progress!
- JDBC App: Currently in progress!
- Grep App: Currently in progress!
